Liebig was very conscious of the vast importance of physiological studies, and at one time he even contemplated occupying himself with medicine; and though this idea was never carried out, a great part of his life was devoted to efforts to advance medical science through physiology. His first work on animal chemistry constituted the second part of his Report to the Chemical Section of the British Association, in 1842. In it he traced the applications of organic chemistry to animal physiology and pathology. Just as Lavoisier during the latter half of the previous century had laid the foundation of what may almost be called a new science, by the success with which he applied to chemistry methods that had long before been employed in physics--that is, the use of weights and measures --so Liebig aimed at applying...
