RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 24 pages. Original publisher: Cincinnati, OH: U. S. Environmental Protection Agency, National Risk Management Research Laboratory, 2005 OCLC Number: (OCoLC)262557511 Subject: Arsenic -- Environmental aspects. Excerpt: . . . locations TW10-1, TW10-2, TW07-2, and TW07-3 during the immediately after the March 2001 peak surface ow. Water period of March 29 to April 3, 2001, immediately following column monitoring was subsequently used to track recovery the major ow event (Figure 8). Also documented in this of the speci c conductance and dissolved arsenic vertical gure is the change in HBHA Pond stratification for three proles within the north end of the HBHA Pond adjacent to sampling dates that bracket the major ow event (inset to the primary discharge of arsenic-laden ground water. Figure 8C). The nearly continuous chemical stratification of Time-series monitoring data collected from a tubing well the HBHA Pond water column was interrupted as a result cluster (NML) installed within the northern portion of the of the March 2001 peak surface ow. HBHA Pond immediately downgradient from ground-water Data collected from upgradient ground-water wells during monitoring cluster TW07 are shown in Figure 10. The rela-the period of observation indicated a relatively constant tive vertical locations of surface-water and ground-water concentration of arsenic discharging into the HBHA Pond monitoring points are shown at the right-hand side of the (Figure 9). Monitoring well TW10 is adjacent to a channel gure. Vertical proles of specic conductance are shown used to route storm water runoff from a large parking facility in the left panel for ve sampling dates from April 5, 2001, (see Figure 4). The channel is lined with rip-rap to minimize to September 13, 2001. The greatest variation in...
